

PRIMOBOL 100

Methenolone Enanthate 100mg per ml.

FOR INTRAMUSCULAR USE ONLY.

DESCRIPTION:

Methenolone Enanthate is a long life androgen similar to natural occurred androgen hormone Testosterone.

As with all the androgen sterification compounds it has a modified release pattern to avoid daily injections.

This compound is used to treat medical conditions such Hypogonadism.

Methenolone Enanthate is a long lasting esterification that allows the administration each 20 days when used for medical conditions treatments.

For fitness purposes the typical procedure is the weekly use or even splitted in 2 applications weekly.

ADMINISTRATION:

Primobol 100mg is given by deep intramuscular injection only.

DOSAGE:

For hypogonadism treatments the weekly doses are close to 125mg.

For fitness purposes the typical doses in males are 300-700mg weekly.

PRECAUTIONS:

The use of any androgen may induce precocious puberty in childs and under 20 years patients, if signs of precocious prepuberty occurs the treatment must be discontinued.

Since androgens may cause fluid retention Primobol 100 must be used with caution in patients with epilepsy, migraine, asthma, and cardiac or renal disease.
