

TRENBOL 100

Trenbolone Acetate 100mg per ml.

FOR INTRAMUSCULAR USE ONLY.

DESCRIPTION:

Trenbolone acetate is a short life androgen similar to natural occurred androgen hormone Testosterone.

As with all the androgen sterification compounds it has a modified release pattern to avoid daily injections.

This compound is used to treat medical conditions such Hypogonadism.

trenbolone acetate is a short lasting esterification that allows the administration to a injection daily of every other day when used for medical conditions treatments.

For fitness purposes the typical procedure is daily.

ADMINISTRATION:

Trenbol 100mg is given by deep intramuscular injection only.

DOSAGE:

For hypogonadism treatments the weekly doses are close to 125mg.

For Fitness purposes the typical doses in males are 50-100mg daily.

PRECAUTIONS:

The use of any androgen may induce precocious puberty in childs and under 20 years patients, if signs of precocious prepuberty occurs the treatment must be discontinued.

Since androgens may cause fluid retention trenbol 100 must be used with caution in patients with epilepsy, migraine, asthma, and cardiac or renal disease.

ADVERSE REACTIONS:

Headhache, irritability, edema, restlessness, depression, tiredness, precocious prepuberty, gynaecomastia, and pain at the site of the injection.
